Subject: MGP Chlorine Release Hotline
UPDATE Atchison Chemical Plume 100% Dissipated - Story KQTV.pdf

From news release...

*A hotline has been set up for residents with medical concerns, or further questions about the incident at MGP.
If you have questions, you're asked to call 913-286-5190.*

Best guess was that the sodium hypochlorite tank would be transferred by 10 pm tonight and Haz Mat Inc would be offsite. Accident investigation will continue but best information is operator error, i.e. unloading tanker truck into wrong tank. Accident investigation should be able to determine how much sulfuric acid was transferred from truck (valve reportedly left open for 30 -40 minutes before it could be closed). Quantity of chlorine gas generated can be calculated from quantity of sulfuric acid transferred once that amount is known. For info on status tomorrow call Randall Rhodes, MGP 913-370-1862 or Wesley Lanter, Atchison County Emergency Manager 913-370-1971.

Action pics and map tomorrow.
